

## Industrial Vacuum Hose & Kit

Dust collection systems work great; but, they cannot possibly remove all the dust in the shop. How do you get rid of the stray dust from your hand tools and other machines that don't have dust collection attachments? The *Industrial Vacuum Hose & Kit* will put the stray dust where it belongs - in the dust collector. **The Vacuum kit includes: 25 feet of 2 1/2 inch hose, two cuffs, and accessories (Gate and Saddle Tap Tee NOT included).** The kit attaches directly to your existing ductwork with a saddle tap tee (call for info). Simply install the saddle, add a 3 inch blastgate, and connect the hose with one of the cuffs. Accessories include: a wand assembly so you don't have to bend over and it can also help reach those hard to get at places; a crevice tool for getting in the corners; a wide floor nozzle to clean the floor; a handy dust brush to clear your fragile projects covered with dust; and a bench nozzle to clean your entire work station.

Why buy a portable vacuum cleaner when you can use the dust collection system that you already have?

Tip: Use a tie strap to secure black cuff to hose.

### Vacuum Hose Specifications

**Constructed of:** Longitudinal and helical polyester fibers bonded to a final layer of PVC reinforced with a spring steel wire helix.

**Color:** Blue

**Available Diameter:** 2 1/2" I.D.

**Hose Lengths:** Available in 25' or 50'
