## INDUSTRIAL STRENGTH Ductwork Direct

JUNE 2011

### Moore Forest Products

**Satisfied with our expertise, quality ducting, and most importantly, the result**

Mitch Moore from Moore Forest Products, Inc needed a dust collection solution for his new planer. The planer shown is a 2 sided planer. It has one, 7" diameter and two, 6" diameter exhaust ports. Each day they run the machine they fill over a quarter of a 48 foot trailer with chips. The TTAP45 shown above is 15X11X11. One 11" is dropping to the planer and the other 11" will be used on additional equipment. The blower is a 20 hp radial blade material handler. There will be two, 48 foot chip trailers side by side. The diverter will nicely allow him to fill one or the other. Mitch is very satisfied with our expertise, quality ducting, and most importantly, the result.

### Innovation or Gimmick?

Back in the early 80's I represented a dust collector product line. Their parent company was a leader in cartridge filters for various applications, such as engine and vehicle exhaust. After several years of research and development, the filter cartridge dust collector was introduced for fine dust filtration. The principle was to have the dust exposed to the outer pleats of cartridge where the maximum amount of surface area was located. Air was drawn through the core of the cartridge. Compared to bag filters, the cartridge provided a substantial amount of filter area in a confined space. The units provided as much filter area as a bag house and required a substantially smaller foot print. They were primarily designed for fine, dry dust. A shaker mechanism or air pulse was used to knock off any cake build up. Used properly, the cartridge filter was a major innovation to the dust collection industry. Today, there are many types of filter material and outside wrappers that can prevent cling, cake build up, and even collect mist. I applied several units to toner dust, graphite dust, glass bead dust, and lead dust, just to name a few.

### Senator Blumenthal Tours Manufacturing Facility in Woodbridge, Reiterates Call for "Made in CT" Initiative

Thursday, June 2, 2011 (Woodbridge, CT) -Senator Richard Blumenthal (D-CT) toured Air Handling Systems in Woodbridge, a manufacturing facility which makes and produces dust collection and fume collection products for industrial ventilation and air handling. Blumenthal met with employees and reiterated his call for the "Made in Connecticut" initiative that encourages sale and production of Connecticut-made goods.

"Manufacturing is alive and well in Woodbridge and across our state, but recent unemployment numbers are a reminder to us that we must remain in vigorous pursuit of job creation," said Blumenthal.

"As our economy continues to recover, now more than ever we must focus on supporting the small businesses like Air Handling Systems that drive growth and create jobs. Having met with and listened to dozens of manufacturers in the past few months, I know we need to put in place the economic policies - and ensure regulatory certainty - that make it possible for entrepreneurs to grow and compete in the global economy."

In the next few weeks, Blumenthal will introduce legislation (MRA) that enables manufacturers to set aside money in accounts to then be reinvested in new hires and equipment. A member of the Senate Manufacturing Caucus, Blumenthal voted to alleviate excessive paperwork burdens and lower costs for small business owners by repealing reporting provisions for the tax form known as a 1099.
