INDUSTRIAL STRENGTH Ductwork Direct

March 2013

Meet our STAFF

Pontiff of Pipe, Doctor of Ductwork, Curt Corum, also known as our Sales Manager has been with us since Pope John Paul I and the Ford administration. With many years of experience Curt is the go to guy for any ductwork related questions. Having not only sold ducting for many years he started off with an understanding of what it takes to actually install a system. He spent his early years installing with tools in hand, on ladders and man lifts on many job sites.

Curt has been recognized as an industry leader in the field of dust and fume collection. Sandor Nagyszalanczy, author of *Woodshop Dust Control*, thanked Curt for "kind and tireless help in educating him about the technical aspects of dust collection systems." Additionally, Rick Peters, author of *Controlling Dust in the Workshop*, expressed gratitude to Curt for providing product and technical support and "especially for helping with the designing systems chapter." Curt served as technical advisor for the installation of dust collection systems for both [The New Yankee Workshop](#) television show hosted by Norm Abram, and [This Old House](#) television show. In addition to providing technical support for several national trade publications, Curt also serves as a technical moderator for an online forum on Dust Collection, Plant Maintenance and Safety for [Woodweb](#), an online source for woodworkers.

When not providing technical assistance with ductwork, Curt, an avid sports fan, can be found playing a round of golf or spending evenings with his wife watching their son perform on stage as a singer and songwriter.

Curt, the ductwork doctor, the go to guy is always answering calls with a friendly, fun greeting to new and old customers alike. Feel free to reach Curt at 800-367-3828 x 102 or email him at ccorum@airhand.com

Combustible Dust Update

Read two of the latest combustible dust articles where staff of Air Handling Systems has provided support.:

[Wood Industry Canada](#)

Dust...Spark...Inferno

Combustible dust is a deadly wood-industry hazard. Positive steps can help prevent explosions from two sources: regulations and fire. [Click here](#) to continue.

[Wood & Wood Products](#)

Preventing Wood Dust in the Plant

One of the most important things a woodworking facility can do is engage in housekeeping and fugitive dust control. If underlying surface colors are not readily discernible on your equipment, there could be a dust deflagration hazard.
