Focus on Customer Service -Air Handling Systems acknowledges all orders within 24 hours

Woodworking Network "ComDust Prevention: Woodshops Take Note"

by Jamison Scott, Air Handling Systems

Combustible dust has become a top health and safety issue in the woodworking industry. Companies with as few as nine employees are being targeted for ComDust-related issues by OSHA. Occurrences of combustible wood dust related fires, some catastrophic, have been increasing, as have incidences of OSHA inspections related to combustible dust in woodworking facilities. With a focus on customer service - our sales staff has a 24 hour order acknowledgment policy. A few times per month we receive calls from customers that are checking status of an order that was forwarded to us by fax or E-mail a week or two prior to follow up. All of our orders pertain to a work environment contaminant issue and a quick turn around is essential. If you have not received an acknowledgment by phone, fax, or E-mail within 24 hours, unfortunately, we have not received your order.

Please feel free to contact us immediately after this time frame has expired. In many instances, there was a transmission problem at the time fax or E-mail was sent. We strive to be your on time source for all of your air handling piping needs. Request for quotations are handled in the same expeditious manner as well. RFQ's that involve custom fabrication may take one extra day.

Sincerely,

<u>Curt Corum,</u>

<u>Sales Manager</u>

Air Handling Systems has a plethora of technical data -click here for more technical sheets and specification on our products as well as information on dust collection and other industry related data.

Combustible Wood Dust Explosion

Combustible dusts are fine particles that present an explosion hazard when suspended in air under certain conditions. But is it not that simple - what actually is combustible dust? How do you prevent not only an explosion but tips to mitigate an impact of a government safety inspection related to combustible dust?

- Learn about combustible dust.
- Understand who is in charge of combustible dust issues.
- Become educated on prevention of combustible dust explosion as well as mitigating impact of government inspections related to combustible dust.
